

Vision 20/20 UPDATE

Building, Renovation and Technological Infrastructure

Overall Status

Goal:

Pursue opportunities to invest in technology and information systems. Through these investments create a more flexible and productive work environment, while simultaneously reducing maintenance, improving overall efficiency and reducing costs.

Strategy:

Develop mobile apps and/or access to Banner and other applications with smart phones and tablet devices.

Recent Key Accomplishments

In May 2016, the University launched a responsive website eliminating the need for a mobile app to easily access information on the University website.

Upcoming Events

Website training for University webmasters is a continuous process and will, therefore, be offered each semester.

Emerging Issues

Banner is an independent software system and as such the responsive design updates made to the University's website do not extend to Banner.

Solutions

Contact Ellucian to determine what if any mobile versions of Banner may be purchased and implemented to improve mobile users' interaction with Banner.

Upcoming Deliverable/Milestones
